

Mustafa Mustafa

Specialties: Physics, Data Analysis, C++, ROOT, Linux

mmustafa.com • mstftsm@gmail.com

Current Position

2013-Present

Postdoctoral Fellow

Lawrence Berkeley National Laboratory,
Relativistic Nuclear Collisions group ([RNC](#)), Nuclear Science Division.
Member of the Solenoidal Tracker at [RHIC](#) ([STAR](#)) experiment.

Advisor: [Jim Thomas](#).

Focus:

I) Measurements of open heavy flavor hadrons production to study heavy quarks interactions and energy-loss in Heavy Ions Collisions (HIC).

II) Carrying R&D efforts related to STAR Time Projection Chamber (TPC) alignment and calibration.

III) Participating in Heavy Flavor Tracker (HFT) software development.

Education

2009-2013

Ph.D. in High Energy Nuclear Physics

Purdue University, IN.

Advisor: [Wei Xie](#).

2004-2008

B.Sc. in Physics

University of Jordan, Amman, Jordan.

Skills and Areas of Expertise

CS

Scientific Computing	C++	Linux Clusters
Monte Carlo Simulations	OOP	Linux Admin.
Data Analysis	Python	Open Source
ROOT	Mathematica	Vim

Online Courses

[Machine Learning \(Andrew Ng\)](#).
[Statistical Learning \(Hastie & Tibshirani\)](#).

Personal

Effective Communicator	Adaptable	Analytical
Good Team Player	Dependable	Innovative

Physics

Heavy-Ion Physics	Quark Gluon Plasma	Heavy Flavor Physics
Mathematical Physics	Mathematical Modeling	

Projects and Contributions

Ongoing:

2014-Present	C++11 STAR coding guidelines committee <i>Objective:</i> Revise STAR coding standard to provide guidance and recommendation for usage of C++11 new features. <i>Contribution:</i> As a member of the committee, my current assignment is to review: Range-for statements. Override controls: <code>override</code> and <code>final</code> . Smart pointers. Move semantics/rvalue reference. Control of defaults: <code>default</code> and <code>delete</code> , move and copy. In-class members initialization. <i>Skills:</i> Knowledge of C++, STAR coding standards. Learning enough about C++11 standards to make informed recommendations. <i>Outcome:</i> Documents are still in the making. Link to the final guidelines will be available soon.
2014-Present	Measurement of non-photonic electrons in $U+U$ collisions (STAR experiment) <i>Objective:</i> Measurement of non-photonic electrons production in $U+U$ collisions at $\sqrt{s}=193$ GeV. <i>Contribution:</i> Mentoring Masters student Katarína Gajdošová (Czech Technical University, Prague). <i>Skills:</i> Teaching and mentorship. <i>Outcome:</i> Preliminary results will be presented at the 53rd International Winter Meeting on Nuclear Physics, Borimo, Italy. (Jan/2015).
2013-Present	Charm production in $p+p$ collision at $\sqrt{s} = 200$ GeV (STAR experiment) <i>Objective:</i> Measurement of charm production at mid-rapidity by direct reconstruction of $D^0 \rightarrow K\pi$ and $D^* \rightarrow D^0\pi \rightarrow K\pi\pi$ from RHIC year 2012 run. <i>Contribution:</i> Hao Qiu and I carried out the entire analysis. <i>Technical skills:</i> Large data analysis. PYTHIA. ROOT, OOP, C++, computer clusters. <i>Outcome:</i> Preliminary results were presented at Quark Matter 2014 (PDF).
2013-Present	Time Projection Chamber (TPC) alignment and calibration (STAR experiment) <i>Objective:</i> Carry R&D on alignment and calibration of STAR TPC (50% of my postdoc appointment at LBNL). <i>Contributions:</i> TPC gas $\omega\tau$ and field distortion correction coefficients measurement using cosmic ray data and verification using Magboltz simulations. TPC alignment vetting using HFT and cosmic rays data. <i>Skills:</i> Knowledge of TPC operations, physics and design. TPC calibrations and alignment techniques. Expert on STAR software infrastructure.
2013-Present	Measurement of non-photonic electrons in $p+p$ collisions (STAR experiment) <i>Objective:</i> Measurement of non-photonic electrons production in $p+p$ collisions at $\sqrt{s}=200$ GeV from RHIC year 2012 run.

Contribution: Mentoring Ph.D. student Xiaozhi Bei (UIC and CCNU).
Skills: Teaching and mentorship.
Outcome: **Poster** at Quark Matter 2014. Paper in preparation.

2012-Present

Heavy Flavor Tracker - PXL simulators (STAR experiment)

Objective: Development and deployment of STAR Heavy Flavor Tracker (HFT) new silicon secondary vertex tracker (PXL) simulators.
Contributions: Designed and implemented: 1) Simulation data containers 2) Simulators interface 3) Fast simulator 4) Pile up hits adder 5) STAR wrapper for **DIGMAPS** sensors response emulation tool. Maintaining the software package.
Skills: Simulation. Software architecture. Knowledge of STAR software architecture. OOP, C++, software design.
Outcome: STAR PXL simulation software. [github](#), [STAR documentation](#).

2014-Present

Heavy Ion Tea (HIT) seminars series (LBNL)

Objective: Organization of **HIT seminars** which are hosted by the (RNC) group at LBNL.
Contribution: As a committee member I am involved in seminars program preparation and organization, speakers identification.
Skills: Staying current in High Energy Particle and Nuclear Physics. Effective communication with committee members and speakers candidates.
Outcome: Fall 2014 seminars series. Spring 2015 series is in preparation.

Selected completed projects:

2014

MTD simulation software code review (STAR experiment)

Objective: Verify compliance of **StMtdSimMaker** code with the STAR coding guidelines and C++ standards.
Technical skills: Knowledge of C++ and STAR coding standards.

2013

FGT point maker code review (STAR experiment)

Objective: Verify compliance of **StFgPointMaker** code with the STAR coding guidelines and C++ standards.
Technical skills: Knowledge of C++ and STAR coding standards.

2011-2013

Measurement of non-photonic electrons production and azimuthal anisotropy (STAR experiment)

Objective: Measurement of non-photonic electrons production and azimuthal anisotropy in $Au+Au$ collisions at $\sqrt{s_{NN}}=200, 62.4$ and 39 GeV.
Contribution: PicoDst production. Data quality assurance. Electrons identification. Data analysis for spectra part. Embedding and efficiency studies.

Technical skills: Large data analysis. Statistical methods. Simulation. PYTHIA. OOP, C++, ROOT, scripting.

Outcome: Ph.D. thesis. [arXiv:1210.5199](#). [arXiv:1405.6348](#). Two more papers in the pipeline.

2012-2013

Embedding Deputy (STAR experiment)

Objective: Train and follow-up with Embedding Helpers on embedding productions. Quality assurance of production physics and detector performance in simulation vs. data. Follow-up on issues and bugs with the core Software and Computation team.

Skills: Effective communication. Team management. Knowledge of STAR data simulation and reconstruction code base. C++, scripting.

Outcome: Identified and helped in solving several software bugs. Helped in restructuring the embedding work-flow and thus refactoring submission and production management scripts.

2010-2012

Embedding Helper (STAR experiment)

Objective: Organize, prepare and submit Heavy Flavor (HF) embedding productions. Quality assurance of the production. Communicate the needs of the HF working group to the embedding team.

Skills: Effective communication. Computational resources management and planning. C++, scripting.

Achievement Highlight: The embedding team and I finished more than 25 HF embedding requests (17m events) for Quark Matter 2012 within sixth months. This required 6500 CPU weeks and 30TB of disk space.

2011

D^* reconstruction with HFT (STAR experiment)

Objective: Study topological reconstruction of D^* using STAR Heavy Flavor Tracker in full GEANT simulations.

Contribution: Carried out the entire study.

Technical skills: Simulations. Data analysis. PYTHIA. ROOT, C++, computer clusters.

Outcome: Optimized topological cuts and signal significance estimates for RHIC projected luminosities for year 2014 run. [PDF](#).

2010-2011

D^0 production in $p+p$ collision at $\sqrt{s} = 200$ GeV (STAR experiment)

Objective: Measurement of charm cross-section at mid-rapidity by direct reconstruction of $D^0 \rightarrow K\pi$.

Contribution: Studying event-mixing techniques in $p+p$ collisions. Cross-checking signal reconstruction. [STAR documents](#).

Technical skills: Large data analysis. PYTHIA. ROOT, C++, computer clusters.

Outcome: [Phys. Rev. D 86, 072013 \(2012\)](#). [arXiv:1204.4244](#).

- Objective:* Constructing the first Linux Cluster in the University of Jordan for computation physics research.
- Contribution:* Organized and lead a group of physicists and engineers to carry the task.
- Skills:* Leadership. Linux administration, networking, cluster infrastructure.
- Outcome:* We completed the construction of two clusters.

Talks

Conference talks:

- 2013/11 **Measurement of non-photonic electrons in STAR experiment**
EMMI workshop on Heavy Flavor & QCD Phase Structure in High Energy Collisions.
 LBL, Berkeley, CA. [PDF](#).
- 2012/08 **Measurements of non-photonic electrons at STAR experiment**
 parallel talk at *Quark Matter 2012 International Conference*,
 Washington D.C. [PDF](#).

Invited talks:

- 2014/06 **Recent open heavy flavor results from STAR experiment**
RHIC & AGS Annual Users' Meeting,
 BNL, NY. [PDF](#).
- 2013/06 **Recent open heavy flavor results at RHIC**
RHIC & AGS Annual Users' Meeting,
 BNL, NY. [PDF](#).
- 2012/10 **Measurements of non-photonic electron in STAR experiment**
International Workshop on Heavy Quark Production in Heavy-Ion Collisions
 Utrecht, Netherlands. [PDF](#).
- 2012/08 **Measurements of non-photonic electron in STAR experiment**
Workshop on Heavy Flavor Production in High-Energy Nuclear Collisions
 UIC, Chicago, IL. [PDF](#).

Seminars:

- 2014/08 **Measurements of electrons from heavy-flavor hadrons decays in STAR experiment**
University of Illinois at Chicago,
 Chicago, IL. [PDF](#).

Publications

50+ publications. Full list available at [Google Scholar](#) or [INSPIRE](#).

Selected experimental physics publications (primary author):

- 2013 *Measurements of non-photonic electron production and azimuthal anisotropy in $\sqrt{s_{NN}} = 39, 62.4, \text{ and } 200 \text{ GeV } Au+Au$ collisions from STAR at RHIC.*

Mustafa Mustafa (for the STAR Collaboration). *Nuclear Physics A* 904-905, 665 (2013). [arXiv:1210.5199](#).

- 2012 *Measurements of D^0 and D^* production in $p + p$ Collisions at $\sqrt{s} = 200$ GeV.*
L. Adamczyk et al. (STAR Collaboration). *Phys. Rev. D* 86, 072013 (2012). [arXiv:1204.4244](#).

Mathematical physics publications:

- 2011 *Supersymmetry identifies molecular Stark states whose eigenproperties can be obtained analytically.*
M. Leshemko, M. Mustafa, S. Kais, B. Friedrich. *New J. Phys.* 13, 063036 (2011). [arXiv:1106.4402](#).
- 2011 *Supersymmetric factorization yields exact solutions to the molecular Stark effect problem for "stretched" state.*
M. Leshemko, M. Mustafa, S. Kais, B. Friedrich. *Phys. Rev. A.* 83, 043415 (2011). [arXiv:1105.5262](#).
- 2009 *A Venn diagram for supersymmetric, exactly solvable, shape invariant, and Infeld-Hull factorizable potential.* M. Mustafa, S. Kais. [arXiv:0911.4206](#).
- 2009 *Effective polar potential in the central force Schrödinger equation*
M. S. Shikakhwa and M. Mustafa. *Eur. J. Phys.* 31, 151 (2010) [arXiv:1001.3693](#).

Book chapters:

- 2009 *General Physics, Electromagnetism Laboratory Manual, 3rd Edition.*
M. S. Shikakhwa, M. Mustafa, R. Al-Rfou', A. Ecevit, M. Ozbakan.
Middle East Technical University, North Cyprus Campus.

Work History:

Research:

- 2010-2013 **Graduate Research Assistant. High-Energy Nuclear Physics Group.**
Purdue University, IN.
The primary focus of my research was heavy quarks interaction with the strongly interacting partonic medium created in heavy-ion collisions so-called Quark Gluon Plasma.
- 2008-2009 **Research Assistant. Remote collaboration with Prof. Sabre Kais.**
Purdue University, IN.
Applications of Supersymmetric Quantum Mechanics techniques to problems in Atomic and Molecular Physics. This work has been initiated during my Dec. 2008 research visit to Max Planck Institute for Physics of Complex Systems, Dresden, Germany.
- 2008 **Research Assistant. Prof. Jameel Khalifeh's group.**
University of Jordan, Amman, Jordan.
Worked on analytical evaluations of lattice Green's functions for isotropic and anisotropic FCC, BCC and SC lattices, where these are applied to evaluate resistance of networks of resistors.
- 2007 **DAAD Intern.**
Ilmenau Technical University, Ilmenau, Germany.
Developed a Mathematica™ visualization package to be used with an Ada implementation of a Kinetic Monte Carlo simulation of thin film growth package.

Teaching:

- 2009-2010 **Astronomy Laboratory Teaching Assistant, [ASTR 263](#), [ASTR 264](#).**
Purdue University, IN.
- 2008-2009 **Physics Laboratory Instructor.**
Middle East Technical University, North Cyprus Campus.
General Physics, Electromagnetism (PHYS 106).
General Physics, Classical Mechanics (PHYS 105).
